

T01. Source records and repeated-pattern accounting

Dataset	Full records	Quality sensitivity	Repeated groups	Repeated members	Excess repetitions	Largest group
D5	2613	2512	42	493	451	200
D3	1104	1099	45	207	162	63

Record counts do not establish unique people. All primary records are retained. D5 metadata reports 2614 although the release contains 2613; D3 reports 22 universities although 30 literal labels are released. No institution aliases are applied.

Evidence-map claims: A01-A04, B01. CSV retains full precision.

T02. D5 source-section measurement screens

Source section	Sample	n	Raw alpha	Ordinal omega	Min. item-total	Min. loading	Max. residual	All criteria pass?
U	full	2613	0.4794	0.5553	0.1967	0.3725	0.0291	False
CD	full	2613	0.7062	0.7258	0.3184	0.3950	0.0490	False
T	full	2613	0.6100	0.6418	0.1926	0.2957	0.0317	False
CT	full	2613	0.5563	0.6061	0.1870	0.2980	0.0430	False
AD	full	2613	0.5534	0.5795	0.2670	0.3413	0.0813	False
U	sensitivity	2512	0.3937	0.4540	0.1367	0.2790	0.0304	False
CD	sensitivity	2512	0.6705	0.6760	0.2722	0.3277	0.0500	False
T	sensitivity	2512	0.5513	0.5688	0.1319	0.2073	0.0335	False
CT	sensitivity	2512	0.4879	0.5176	0.1274	0.1991	0.0477	False
AD	sensitivity	2512	0.4840	0.4859	0.2056	0.2440	0.0860	False

U: AI usage; CD: cognitive dependence; T: trust in AI; CT: reported reduction in independent thinking; AD: academic decision-making. Names are source-defined headings, not validated subscales. Ordinal omega concerns latent responses conditional on a one-factor model. All-section screen requires alpha/omega ≥ 0.70 , item-total ≥ 0.30 , loading ≥ 0.40 , maximum residual ≤ 0.10 and no model boundary. No section passes all criteria.

Evidence-map claims: B02-B04. CSV retains full precision.

T03. Accepted descriptive k=2 profiles and concentration

Dataset	Sample	Profile	Records	Distinct full patterns	Largest pattern n	Largest pattern share	Silhouette	Mean omitted ARI
D5	full	1	2406	2154	100	0.0416	0.1989	0.9944
D5	full	2	207	8	200	0.9662	0.1989	0.9944
D5	sensitivity	1	2307	2081	100	0.0433	0.1940	0.9994
D5	sensitivity	2	205	6	200	0.9756	0.1940	0.9994
D3	full	1	769	710	31	0.0403	0.3804	0.9972
D3	full	2	335	232	63	0.1881	0.3804	0.9972
D3	sensitivity	1	763	704	31	0.0406	0.3815	0.9959
D3	sensitivity	2	336	233	63	0.1875	0.3815	0.9959

Neutral profile numbers are dataset-specific and unordered. ARI is mean omitted-record perturbation agreement over 100 subsamples of 80%; it is not predictive accuracy. D5_P2 includes 200 copies of one full-record pattern: 200/207 primary and 200/205 sensitivity. Stability is conditional on these released multiplicities.

Evidence-map claims: B07-B10. CSV retains full precision.

T04. C feasibility audit: record-random held-out overlap

Sample / target	Profile	Training n	Held-out n	Held-out: seen pattern	Held-out: unseen pattern	Overlap fraction
full	D5_P1	1924	482	65	417	0.1349
full	D5_P2	166	41	40	1	0.9756
sensitivity_fixed_target	D5_P1	1845	460	58	402	0.1261
sensitivity_fixed_target	D5_P2	166	41	40	1	0.9756
sensitivity_refit_target	D5_P1	1847	460	58	402	0.1261
sensitivity_refit_target	D5_P2	164	41	40	1	0.9756

Diagnostic allocation only; no classifier was fitted. All 25 survey items define the target. Five contextual metadata fields avoid that construction but do not restore respondent independence. The 200-record P2 pattern exceeds both primary allocations (166 training, 41 held-out); intact-pattern protection cannot satisfy this design.

Evidence-map claims: C01-C04. CSV retains full precision.

T05. D3 CGPA bands by nominal descriptive profile

Sample / target	Profile	Profile n	Below 2.50	2.51-3.00	3.01-3.50	Above 3.50
full	D3_P1	769	6 (0.78%)	138 (17.95%)	443 (57.61%)	182 (23.67%)
full	D3_P2	335	2 (0.60%)	66 (19.70%)	206 (61.49%)	61 (18.21%)
Quality: fixed	D3_P1	764	5 (0.65%)	137 (17.93%)	441 (57.72%)	181 (23.69%)
Quality: fixed	D3_P2	335	2 (0.60%)	66 (19.70%)	206 (61.49%)	61 (18.21%)
Quality: refit	D3_P1	763	5 (0.66%)	137 (17.96%)	441 (57.80%)	180 (23.59%)
Quality: refit	D3_P2	336	2 (0.60%)	66 (19.64%)	206 (61.31%)	62 (18.45%)

Cells are records (within-profile percentage). Self-reported ordered bands are not continuous grades; the source does not specify an exact 2.50 value. Fixed sensitivity retains primary labels; refit sensitivity uses accepted B sensitivity labels. Percentages may differ from 100 by rounding.

Evidence-map claims: D01, D03. CSV retains full precision.

T06a. D3 rank comparison and effect size

Sample / target	n	H (df=1)	Nominal p	H / (N - 1)	Cliff delta (P2 - P1)
full	1104	2.8025	0.0941	0.0025	-0.0559
Quality: fixed	1099	2.9604	0.0853	0.0027	-0.0575
Quality: refit	1099	2.6211	0.1054	0.0024	-0.0540

H is tie-corrected Kruskal-Wallis with nominal chi-square reference (df=1). Rank epsilon squared is explicitly $H/(N-1)$. Cliff delta is P2 minus P1; a negative value favors higher bands in P1. Profiles are not ordered severity tiers. Record independence remains unverified, so reference p values are nominal. All variants are very small and inconclusive, not evidence of equivalence.

Evidence-map claims: D02-D05. CSV retains full precision.

T06b. D3 conditional 95% percentile intervals for Cliff delta

Sample / target	Assumed independent unit	Unit count	Conditional 95% lower	Conditional 95% upper
full	Records (reference)	1104	-0.1211	0.0076
full	Intact full patterns	942	-0.1309	0.0182
full	Literal institutions	30	-0.1127	0.0766
Quality: fixed	Records (reference)	1099	-0.1212	0.0073
Quality: fixed	Intact full patterns	937	-0.1308	0.0162
Quality: fixed	Literal institutions	30	-0.1139	0.0754
Quality: refit	Records (reference)	1099	-0.1168	0.0115
Quality: refit	Intact full patterns	937	-0.1308	0.0204
Quality: refit	Literal institutions	30	-0.1116	0.0748

10,000 bootstrap repetitions per row. Record and intact-pattern draws are stratified by fixed profile; literal-institution draws are not. Independent units are assumptions. None of these intervals includes profile-estimation uncertainty or establishes population coverage. All intervals include zero.

Evidence-map claims: D04. CSV retains full precision.

T07. External GAIID ordinal configural follow-up

Configural model	Scaled chi-square	df	Scaled CFI	Scaled RMSEA	SRMR	Robust CFI	Robust RMSEA	Follow-up allowed?
configural_USA	51.6329	41	0.9839	0.0475	0.0585	0.9509	0.0645	True
configural_Indonesia	107.1632	41	0.9678	0.1211	0.0797	0.8982	0.1278	False
configural	159.1830	82	0.9725	0.0915	0.0689	0.9111	0.1005	False

WLSMV with std.lv, theta parameterization and the Wu-Estabrook identification plan. Follow-up uses scaled CFI ≥ 0.90 , RMSEA ≤ 0.08 and SRMR ≤ 0.08 ; robust alternatives are reported separately. Indonesia and multigroup fits fail. CT and TP are blocked by category support. No equality constraints are tested. USA $n=116$; Indonesia $n=111$. No Bangladesh anchors or latent equivalence are established.

Evidence-map claims: D06-D11. CSV retains full precision.

T08. Exploratory observed-item associations within each country

Country	Item X	Item Y	n	Spearman rho	Permutation p	Holm p (four tests)	Conditional 95% lower	Conditional 95% upper
USA	GAID6	CT9	116	0.0976	0.3035	0.9105	-0.0829	0.2726
USA	GAID6	TP6	116	-0.0338	0.7279	1.0000	-0.2161	0.1463
Indonesia	GAID6	CT9	111	-0.0343	0.7227	1.0000	-0.2170	0.1566
Indonesia	GAID6	TP6	111	0.1215	0.2049	0.8196	-0.0756	0.3084

GAID6: confidence without AI; CT9: source-credibility checking; TP6: efficient work completion (consult the source workbook for exact wording). Spearman rho; 9,999 permutations; Holm adjustment across all four tests; 5,000 bootstrap repetitions. Intervals are marginal conditional 95% intervals, not multiplicity-adjusted intervals. No country-difference test, latent comparison or causal inference is made.

Evidence-map claims: D12. CSV retains full precision.
